About the cover: Sister Mary Justine trains students at Milwaukee's Pius XI High School how to use an adding machine. This photograph publicized a 1954 mathematics teaching experiment sponsored by the Burroughs Corporation, which donated \$30,000 of adding machines to Milwaukee area schools. The experiment, conceived by Andrew F. Schott of Wisconsin State College, Milwaukee, sought to improve student achievement in math through the use of an abacus and adding machine. As such, the photo captures the long-term efforts made by educators and society to harness information technology and reflects the kinds of concerns discussed in this special issue emanating from the work of the Committee on Automated Records and Techniques (CART). (Photograph courtesy of the Burroughs Corporation Records at the Charles Babbage Institute, University of Minnesota)
